-----

Learn how Maxeon and AIKO are leading the way with ABC technology and discover how Sunollo integrates this cutting-edge innovation to offer superior solar panels.

Discover the new generation of ABC Gen2 panels from Aiko and all the improvements they include.

ABC stands for All Back Contact, meaning all the electrical contacts of each solar cell are moved to the rear side of the cell. By eliminating the metal lines on the front of the cell, ABC modules ...

In this article, we will take an in-depth look at one of the most promising innovations in the photovoltaic sector: AIKO modules with ABC (All Back Contact) technology. We will analyse their performance, ...

Our custom manufacturing capabilities let us create HPBC, HIBC, or ABC panels in exactly the size, power output, and configuration your project demands. From unusual roof shapes to ...

ABC stands for "All Back Contact." Think of it this way - regular solar panels have silver wires running across the front. These wires block sunlight. ABC panels move all those wires to the ...

AIKO's second-generation solar modules for residential, C& I and utility-scale applications featuring higher power rate, unique partial shading optimization, high temperature restriction and micro-crack ...

ABC modules with All Back Contact technology are solar modules in which all electrical contacts are located entirely on the back of the cells. This eliminates the shading caused by front contacts, as is ...

This white paper aims to systematically analyze the industrial breakthrough path and application value of BC technology, so that investors in the photovoltaic industry can have a clear understanding of the ...

The main advantages of ABC are not only seen in lab parameters but especially in long-term operation. This technology addresses the weaknesses of conventional modules and ensures higher and more ...
