BASIC Programming is an Atari Video Computer System (later called the Atari 2600) cartridge that teaches simple computer programming using a dialect of BASIC. Written by Warren Robinett and released by Atari, Inc. in 1980, this BASIC interpreter is one of a few non-game cartridges for the console. The Atari VCS's RAM size of 128 bytes restricts the possibilities for writing programs.

In our latest video, we explore the fascinating journey of programming on this iconic console. Join Rob as he walks through creating simple programs using the Atari Basic Programming...
