-----

In a new study, researchers at the Fraunhofer Institute for Solar Energy Systems ISE have calculated that silicon photovoltaic modules manufactured in the European Union produce 40 percent less CO2 ...

Flat glass products help to improve the energy efficiency of buildings, support the transition to clean mobility, and contribute to efficient renewable solar energy generation.

While investing in new technologies and scaling up recycling practices pose significant economic, technological, and industrial challenges, Glass for Europe advocates for a set of ...

The EESC urges the EU to recognise that glass is indispensable for the production of green energy. Glass is a key component not only of photovoltaic solar panels but also of wind turbines and can be ...

The European Union solar glass market stands at a critical inflection point, propelled by an unprecedented policy-driven acceleration in renewable energy deployment and a strategic imperative ...

High-performance glazing, including solutions such as solar control glass and dynamic glazing, can directly reduce heating and cooling energy requirements. Glass for Europe's full ...

With AGC's Energy coated glass, you will experience abundant daylight while enjoying excellent solar protection. The Energy coating blocks out excess incoming heat while maintaining a high level of ...

Flat glass products are essential to reduce overall CO2 emissions by limiting energy consumption in buildings, developing safe and low-carbon mobility and providing photovoltaic efficiency.

Glass products are indispensable to the transition towards a climate-neutral circular economy and therefore it asks EU policymakers to put the glass sector and all its subsectors at the heart of current ...
