---

We help people and wildlife adapt to climate change and reduce its impacts, including flooding, drought, sea level rise and coastal erosion. We improve the quality of our water, land and air by...

Energy density improvements vary by sector. In aerospace, they can significantly impact battery demand, while in automotive, their effect is minimal if regulations push for 100% BEVs. Higher ...

Respondents to the Call for Evidence highlighted that having an entirely domestic UK battery supply chain is unlikely feasible and often not desirable in promoting resilience.

We analyse the impact of several technologies (Li-ion and flow batteries, pumped hydro, hydrogen) on Great Britain's balancing mechanism, the main market for supply-demand balancing and congestion ...

For domestic battery storage to play a meaningful role in flexibility markets, it must be beneficial to the households who choose to finance and install it. In this paper we examine the value of domestic ...

High capacity and reliable rechargeable batteries are a critical component of many devices, modes of transport, and our evolving energy generation capability. Today we publish the ...

The UK's battery import dependency is a strategic problem that won't be solved quickly. China's new export controls make it urgent, but urgency doesn't guarantee action.

This article uses metered export data to estimate how much batteries in Great Britain have degraded over time, how their behaviour has changed, and what this reveals about the relationship between ...

We identify the primary global networks of lithium mining and refining, battery chemical production, technology development and finance in which the UK's battery manufacturing capacity ...

# Effects of energy storage batteries imported from Manchester UK

Here, Professor Robert Dryfe, explores how Long Duration Energy Storage technologies, like batteries, could solve the challenge and makes recommendations to support their rollout.
