What are the different solar inverter sizes?

Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly. During our research, we discovered that most inverters range in size from 300 watts up to over 3000 watts. In this article, we guide you through the different inverter sizes.

What wattage should a solar inverter be?

The inverter wattage must be the same or greater than your solar panel's watts. Here is a chart that shows the watts consumption of various appliances and what inverter size you will need. Note that this guide includes a 20% safety margin for the inverter watts. This safety percentage can be adjusted.

Is a 3000 watt inverter enough?

If your devices require 400 watts and you have 300 continuous /200 surge inverter, it is not enough. A 3000 watt inverter usually has 6000W surge power, or double the running watts. Most of the attention in solar power is focused on solar panels, but do not neglect the inverter.

Do you need a solar inverter?

The inverter is one of the most important components of a home or portable solar power system. Solar panels produce DC electricity, but you need an inverter to convert DC power into 120/220 volt AC electricity. Only after conversion can home appliances and other devices use it.
