Vast energy-hungry warehouses around Dublin's ring road host thousands of servers handling massive amounts of cloud computing, storage and AI demands for data giants like Google, ...

We are all digital consumers, and the processing and safe storage of data from all sectors of life are considered to be part of Ireland's critical infrastructure. However, by necessity data centres are very ...

The purpose of the private wire policy is to accelerate the roll-out of renewables and energy storage, said a spokesperson for the Department of Climate, Energy and the Environment. ...

Dozens of massive data centers are consuming more electricity than all of the urban homes in Ireland and starting to wear out the warm welcome that brought them here.

According to a study by Bitpower in October 2024, EUR15 billion has been invested in building data centre facilities in Ireland. The study found that a future construction pipeline of EUR8 - EUR10 ...

In Ireland, data centers are straining the electric grid to the brink of blackout threats. These dire warnings by EirGrid, the Irish electric grid operator, ushered in a 2022 ban on new ...

Under the proposed policies, new data centers connecting to the electricity network will be required to provide generation and/or storage capacity to match the requested connection ...

Dozens of massive data centers are consuming more electricity ...

The green energy park model is now central. Data centres will co-locate with renewable energy and storage clusters, or link with nearby solar and wind farms, as seen in Amazon's recent ...

New data centres costing EUR5.6 billion have planning approval but no electricity to power them, an industry chief has said as the sector urges Ministers to tackle restrictions that have left big...

Ireland data center energy storage

Ireland's most pressing energy need is not more power but the ability to better manage its grid and store renewable power, says Christopher Brown, a Partner at KPMG in Ireland.
