-----

If spent power batteries are used in the form of battery packs, the operation is simple and the cost is low, but the safety risks are high and the battery capacity in the battery pack cannot be ...

The present disclosure relates to the technical fields of lithium-ion batteries and power electronics, and in particular to a decentralized active equalization method for a cascaded...

At present, we have mastered the production technology of lithium materials, patented technology of lithium battery pack disassembly, cascade utilization and recovery of valuable metals, and explored ...

Lithium-ion (Li-ion) battery packs recovered from end-of-life electric vehicles (EV) present potential technological, economic and environmental opportunities for improving energy systems and ...

As these batteries reach the end of their life cycle, efficiently utilizing their residual value has become a key issue that needs to be resolved. This paper reviews the key issues in the...

This review is dedicated to comprehensively reviewing the residual capacity estimation methods and consistency sorting methods for retired lithium batteries before they are utilized in ...

This paper discusses the latest research results in the field of power battery recycling and cascade utilization, and makes a comprehensive analysis from four key dimensions: technical methods, ...

In this article, an active equalization method for cascade utilization lithium battery pack with online measurement of electrochemical impedance spectroscopy is proposed to actively equalize the ...

To address the challenges of the current lithium-ion battery pack active balancing systems, such as limited scalability, high cost, and ineffective balancing under complex unbalanced ...
