Why is glass breakage a problem in solar power plants?

Modern PV modules often use thinner glass to reduce weight and material costs which lead to glass breakage. Glass breakage is a growing concern for the solar power plant operators.

Are solar modules Breaking Glass?

The pv magazine editorial team includes specialists in equipment supply, manufacturing, policy, markets, balance of systems, and EPC. Solar modules are getting bigger, thinner, and more powerful. But from Texas to Thailand, the same problem is appearing: broken glass.

Is PV glass breakage a problem in utility-scale power plants?

There have been many changes to PV module design and materials in that time. Several changes have increased the risk of glass breakage. But there is probably no single change that is responsible for the problem. Here, we summarize our observations and thoughts on PV glass breakage in utility-scale power plants.

Can glass break a PV module?

Studies have found that contact between glass and frames is linked to spontaneous breakage in some PV modules. A recommended solution is using rubbery silicone spacers which maintain separation between the glass and the frame. Many modules already use silicone gaskets, but some designs leave gaps where the glass directly touches the metal frame.

VDE Americas" David Devir looks at the origins of the oversized PV glass problem and considers how the industry can return to reliability.
