As temperatures plunge below -20°C in northern China, traditional coal-based heating systems strain energy grids and pollute skies. But what if the same sunlight that illuminates icy landscapes could ...

There are two main types of solar energy technologies--photovoltaics (PV) and concentrating solar-thermal power (CSP). On this page you'll find resources to learn what solar ...

Solar power works by converting energy from the sun into power. There are two forms of energy generated from the sun for our use - electricity and heat. Both are generated through the use of solar ...

Northern Sun Energy is your trusted partner for solar and energy storage projects, offering comprehensive services, including construction management, full turnkey installation, and tailored ...

Solar heating utilizes the energy stored in solar panels to power your home's air and water heating systems. In this guide, we go over the benefits and drawbacks of solar heating to help ...

People have used the sun's rays (solar radiation) for thousands of years for warmth and to dry meat, fruit, and grains. Over time, people developed technologies to collect solar energy for ...

Guidance on connecting small and large-scale generation and energy storage to our network. Can't find what you are looking for? Contact us for more information about your solar panel, storage or ...

Photovoltaic-thermal (PVT) hybrid systems offer a dual-purpose solution for northern homes, combining solar electricity generation with heat production. These systems consist of ...

Northern solar power generation and heating

Solar thermal systems are typically used for direct heating, such as heating water or air in buildings. In contrast, PV systems generate electricity that can power electric heating solutions or be ...
