How many photovoltaic power plants should be installed?

To provide sufficient supply for the global energy consumption, a cumulative amount of 18 TW of photovoltaic power plants should be installed. This means the solar energy industry has a long way to reach to a point where at least 10% of the world energy consumption is generated by solar plants.

What is solar photovoltaic (PV)?

Solar photovoltaic (PV), which converts sunlight into electricity, is an important source of renewable energy in the 21st century. PV plant installations have increased rapidly, with around 1 terawatt (TW) of generating capacity installed as of 2022.

How many photovoltaic plants are there in the world?

As statistics shows, by the end of 2020, the installed capacity of world photovoltaic plants has reached to more than 751 GW. This indicates an increase of about 18.5% from the total of 634 GW solar plants that had been installed by the end of 2019.
