-----

The plastic film adhered to solar light cells is primarily a protective layer, crucial for shielding the delicate photovoltaic material from environmental damage, such as moisture, UV ...

Polyester films can be used in a variety of constructions that are either mounted on the back of photovoltaic solar modules (crystalline) or used as a part of the construction for coated flexible ...

The solar backsheet serves as the critical protective layer in photovoltaic modules, safeguarding internal components against environmental factors while ensuring long-term performance.

DuPont(TM) Tedlar® is a highly versatile, polyvinyl fluoride film that provides a long-lasting finish to a wide variety of surfaces exposed to harsh environments while its inert, non-stick properties make it an ...

Our durable backsheet film ensures superior protection, extending the lifespan and performance of your solar modules in any climate. Browse our backsheets today!

Coveme develops and manufactures multilayer and monolayer polymer laminates for the protection of solar panels. These laminates, marketed under the company's dyMat® brand, provide electrical ...

Whether it's for use with standard, fast or ultra-fast cure encapsulants and laminating processes, Flexcon MultiGuard® multi-layer backsheet products offer long-life UV and moisture protection and ...

Designed for photovoltaic modules, energy storage systems, and solar panel protection, it ensures reliable encapsulation, extended lifespan, and enhanced durability.

PV laminates, Solar Films and PV Backsheet solutions for the photovoltaic industry.

Enhance your solar energy solutions with CloudFilm's Photovoltaic Backsheet Film, providing you with superior protection and efficiency.
