In 2024, the growth in electricity generation from solar PV alone surpassed that of all other renewable energy (RE) technologies combined. This is despite a substantial rebound in ...

The full report, A Decade of Growth in Solar and Wind Power, goes into more detail about state-level trends in utility- and small-scale solar. Download the data to see where your state ranks.

While energy is essential to modern society, most primary sources are non-renewable. The current fuel mix causes multiple environmental impacts, including climate change, acid rain, freshwater depletion, ...

Solar energy is the fastest growing and most affordable source of new electricity in America. As the cost of solar energy systems dropped significantly, more Americans and businesses ...

Percentage change in solar energy generation relative to the previous year. Data source: Energy Institute - Statistical Review of World Energy (2025) - Learn more about this data. Figures ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

In 2024, generators added a record 30 GW of utility-scale solar to the U.S. grid, accounting for 61% of capacity additions last year. We expect this trend will continue in 2025, with 32.5 GW of new utility ...

Solar PV power generation in the Net Zero Scenario, 2015-2030 - Chart and data by the International Energy Agency.

Climate Central's WeatherPower™ tool produces daily estimates and forecasts of local solar and wind generation across the continental U.S. Daily forecasts from WeatherPower reflect the influence of ...

Seventeen or eighteen solar power generation

A review by the Campaign of the Federal Energy Regulatory Commission's latest Energy Infrastructure Update shows that solar photovoltaics supplied nearly 75% of all new generation ...
