The Republic of Seychelles is taking a major step toward a more sustainable and resilient energy future with the launch of the Seychelles Renewable Energy Acceleration Program (REAP), approved by the ...

By deploying floating solar technology, the project makes use of lagoon surface area rather than scarce land, helping to overcome space constraints while unlocking new clean energy ...

Seychelles has launched construction of its first utility-scale floating solar power plant, a 5.8MW project in the Providence Lagoon on Mahé Island. It is expected to play a pivotal role in ...

Meta Description: Discover how solar panels paired with advanced energy storage systems can transform Seychelles' energy landscape. Learn about cost savings, reliability, and eco-friendly power ...

In 2023, solar energy emerged as the leading source of electricity production from renewable sources in Seychelles, marking a continued shift towards sustainable energy.

The current electricity system is supplying power reliably to the population; however, it is oil-dependent, thus making it incompatible with future sustainable economic development.

Just weeks after financial close, the project is now entering its final development stage. Backed by a long-term power purchase agreement, all electricity generated will be sold to the PUC, ...

To date, affordable and effective solar and battery storage systems have opened up new possibilities for the archipelago, particularly in its high-end tourism sector.

As the first IPP utility-scale project in Seychelles and one of the largest floating solar PV projects in Africa, it represents a significant milestone for the region.

Seychelles sells home solar power stations to generate electricity

Once operational, the project is expected to generate 25.8 GWh of electricity annually--enough to power 11% of homes on Mahe, Seychelles' main island--and reduce carbon ...
