What is a distributed cooperative operation strategy for multi-agent Energy Systems?

A distributed cooperative operation strategy for multi-agent energy systems integrated with wind, solar, and buildings is proposed. Bidirectional interactions between wind/solar power plant and buildings are realized by the Nash bargaining-based incentive cooperative mechanism.

What is a multi-agent energy system?

Fig. 1. The framework of the multi-agent energy system. The energy system consists of three agents, namely WPP, SPP, and the buildings. In the conventional trading mode, three agents will operate independently, i.e., the buildings purchase electricity from the power grid (PG), and WPP and SPP generate and sell electricity to PG for profits.

What is the IEA photovoltaic power systems programme (PVPS)?

The IEA Photovoltaic Power Systems Programme (PVPS) is one of the collaborative R&D Agreements established within the IEA and, since its establishment in 1993, the PVPS participants have been conducting a variety of joint projects in the application of photovoltaic conversion of solar energy into electricity.

How can a CCP strategy help a multi-agent energy system?

By setting a reasonable confidence level, the strategy based on CCP can take both the economy of the multi-agent energy system and the consumers' comfort into account, and make a moderate compromise according to the real situation and requirements.

6. Conclusions

By addressing these elements proactively, a solar power cooperative can enhance its resilience against evolving challenges. With a comprehensive strategy that draws upon cooperation, ...

The rooftop solar power generation has been focused upon by many countries like Germany and Japan, and special policy initiatives have been rolled out to promote this sector. which supplies power to the ...

To explore the bidirectional interaction between renewable energy and buildings in multi-agent energy systems, this paper proposes a distributed cooperative operation strategy for multi ...

Cross-sector collaboration in solar energy has emerged as a game-changing force, driving innovation and

Solar power generation cooperation agent

helping organizations slash energy costs while accelerating sustainable ...

On September 1, President Xi Jinping announced at the "SCO+" meeting in Tianjin that China will work with other Shanghai Cooperation Organization (SCO) members to add 10 GW of ...

Then, this article constructed tripartite determine evolutionary game model and stochastic evolutionary game model of wind power stations, solar power stations and pumped ...

Explore cutting-edge energy storage solutions in grid-connected systems. Learn how advanced battery technologies and energy management systems are transforming renewable energy infrastructure. ...

Shanghai Electric Power Generation Group is the core industry sector of Shanghai Electric Group, specializes in power generation equipment manufacturing, power generation engineering and full life ...
