-----

There is a growing trend towards decentralised electricity generation in South Korea, characterised by increased adoption of privately installed solar panels for electricity production and ...

South Korea aims for 20% renewable electricity by 2030, which is well below the global share of 60% renewable electricity set out in the IEA Net Zero Emissions scenario.

According to a government proposal published in 2022, South Korea plans to substantially increase its renewable energy capacity by the late next decade. The strategy aims to boost the share of ...

This reliance is unsustainable from energy security and environmental perspectives, and it is incompatible with the country's objective of reaching carbon neutrality by 2050. Focusing on the ...

Renewables such as solar panels, wind turbines and hydroelectric dams generate electricity without burning fuels that emit greenhouse gases and other pollutants.

South Korea needs to focus not only on expanding capacity but also on the qualitative growth of its renewable energy sector. This shift would also be pivotal for global competitiveness in ...

Renewable sources, hydrogen and more efficient methods of storing and transporting energy have allowed greater adoption of new energy technologies over the years. Despite this, only ...

South Korea's new government expands offshore wind and solar, maintains nuclear, and phases out coal, yet risks persist with costly hydrogen ambitions.

As South Korea embarks on its decarbonization path, maintaining competitiveness, affordability and reliability will require critical and timely reforms to its power sector. Renewable ...

What clean energy goals are technically and economically feasible, given inherent uncertainties about

electricity demand growth, fossil fuel prices, and RE and energy storage costs?
