Where is Switzerland's first solar power plant located?

Sun-Ways has inaugurated Switzerland's first removable solar power plant installed between railway tracks open to active train traffic. Located in the village of Buttesin the canton of Neuchâtel, the pilot project marks a significant milestone in the development of innovative solar infrastructure integrated directly into the rail network.

Could Switzerland be able to expand its solar power network?

Within Switzerland alone, the potential is immense, with 3,107 miles of railway tracks that could accommodate approximately 2.5 million solar panels. Such an expansion would represent a significant contribution to global renewable energy efforts and exemplify Switzerland's commitment to sustainability.

Are solar panels a breakthrough in combining existing infrastructure?

Installed mechanically on a 100-meter section of active railway, the panels represent a breakthrough in combining solar production with existing infrastructure. Sun-Ways has inaugurated Switzerland's first removable solar power plant installed between railway tracks open to active train traffic.

Could a solar plant revolutionize transportation infrastructure?

A Swiss startup has achieved a groundbreaking milestone by launching the world's first photovoltaic solar plant on railway tracks, promising to revolutionize renewable energy integration in transportation infrastructure.

This report highlights Switzerland's continued progress in scaling up solar power deployment, with steady growth in PV installations despite a slowdown from previous record years. In 2024, ...

Swiss startup Sun-Ways says it has activated what it calls the world's first removable solar plant on active rail tracks, with passenger trains set to run over the 18 kW installation from April ...

Jakarta, INTI - A groundbreaking clean energy innovation has emerged from Switzerland. Known for the precision of its transport systems, the country is once again drawing global attention ...

Switzerland's cumulative installed solar power reached around 8 GW at the end of December 2024, following 1.78 GW of new capacity additions for the year.

Switzerland installs solar power system

Discover Switzerland's ambitious new targets for solar energy, aiming for 34 TWh by 2050. Learn how new laws and cantonal goals are shaping its renewable future.

A Swiss startup has achieved a groundbreaking milestone by launching the world's first photovoltaic solar plant on railway tracks, promising to revolutionize renewable energy integration in ...

The association attributed the anticipated slowdown to temporary uncertainties surrounding the new Electricity Act. Growth is expected to stabilize at current levels as the law ...

Sun-Ways has inaugurated Switzerland's first removable solar power plant installed between railway tracks open to active train traffic.

Swiss startup Sun-Ways has switched on a removable solar system installed on a working railway line in western Switzerland. The plant, billed as the world's first track-mounted solar ...

Swiss startup Sun-Ways installs solar panels between train tracks near Neuchâtel to generate renewable electricity and test their future use in powering rail transport systems.
