What is the global market outlook for solar power 2025-2029?

The Global Market Outlook for Solar Power 2025-2029 is SolarPower Europe's flagship annual publication, delivering the most authoritative analysis of solar market trends worldwide. The 2025 edition reports a record 597 GW of solar capacity installed in 2024, bringing total global capacity to 2.2 TW.

Which countries contribute the most to solar PV development?

3. Solar PV energy 3.1. Solar PV installed capacity The global installed solar PV capacity over the past ten years and the contributions of the top fourteen countries are presented in Table 3, Table 4 (IRENA, 2023). Europe was the leading contributor to global solar PV projects in the early years of solar PV development.

Which countries will dominate the solar PV market by 2050?

By 2050, Asia, primarily China, is expected to maintain its leadership in the solar PV market with 4837 GW (about 57% of the world's PV installations), followed by North America at 21% and Europe at 11%. Meanwhile, a much larger market growth is anticipated for both Africa and South America by 2050, as shown in Fig. 2. Fig. 2.

Which countries use solar energy?

Solar Energy Statistics stated that China holds over 35% of the global solar market share. Over 7.3 million homes in the U.S. are using solar power. The U.S. has enough renewable energy resources to produce 100 times its yearly electricity needs. Every day, the Earth gets about 174 petawatts of solar energy.

Solar energy users save around 35 tons of CO<sub>2</sub> emissions and 75 million barrels of oil each year. Utility-scale PV power plants made up 70% of global solar electricity generation in 2022.

The world is on track to add 593 GW of solar power this year Ember estimates that at the current rate of additions, the world will install 593 GW of solar panels this year. That's 29% more than ...

The Global Solar Power Tracker is composed of worldwide facility-level data on utility-scale (1 MW+) solar photovoltaic (PV) and solar thermal facilities, as well as country-aggregated ...

o The United States, despite being a leading PV market, is below the global average of other leading markets

# The latest situation of solar power generation in my country

in terms of PV generation as a percentage of total country electricity ...

Electricity generation from solar, measured in terawatt-hours.

The present review study, through a detailed and systematic literature survey, summarizes the world solar energy status along with the published solar energy potential assessment articles for ...

Globally, 347 gigawatts (GW) of photovoltaic (PV) capacity were added to power generation in 2023, which has made it a record-breaking year for solar power generation, revealed a ...

Global Market Outlook for Solar Power 2025-2029 6 May 2025 Global Market Outlook for Solar Power 2025-2029 provides an in-depth forecast and analysis of the global solar power sector, ...

Find up-to-date statistics and facts on the global solar photovoltaic industry.

Record renewables growth led by solar helped push clean power past 40% of global electricity in 2024, but heatwave-related demand spikes led to a small increase in fossil generation.
