Can solar panels be transported around the world?

Unfortunately, the protocol for transporting PV modules that would become a standard for everybody hasn't been developed yet. Solar industry is still young, and panels from manufacturers around the world are all different. However, some lessons have been learned and general guidelines for moving solar panels around are already worked out.

How to transport solar panels?

Usually, to transport solar panels, a pallet is used. Here is how a good company packs it:

- o First panels go on the pallet bottoms up and the last one is placed front side up.
- o Corner protectors and foam pads across the frame are added.
- o Usually a piece of cardboard or plastic is placed in between every two panels.

Can you move solar panels around?

However, some lessons have been learned and general guidelines for moving solar panels around are already worked out. What solar panels fear is mechanical pressure. Improper handling or bad placement can cause microcracks in PV modules which immediately lower their power.

Can you carry a solar module alone?

Do not carry a module alone; always use two people to lift and carry. The LONGi team of industry veterans and experts is excited to partner with you for success from arrival to installation with LONGi's PV solar modules.

Having two people lift panels with the correct lifting technique. Using mobile carts or forklifts to transport panels onto and around the work site. Never climbing ladders while carrying solar ...

Inside the box each module is placed vertically. Put the module into the carton from one side with protector on four corners. Citizen Solar recommends that two people should load into and remove ...
