-----

Nanogrids and Microgrids NLR's facilities can emulate microgrids and nanogrids connected to marine energy and other energy technologies and pair modeling tools and hardware ...

Microgrid operations based on renewables, most commonly solar and wind, exhibit several technical challenges (Uddin et al., 2023). One significant challenge is the temporal variability ...

T1 - Two-Stage Coordinated Operation of A Green Multi-Energy Ship Microgrid With Underwater Radiated Noise by Distributed Stochastic Approach N2 - Increasing multi-energy coordination in the ...

Coupling energy storage with hydrogen production technologies to establish a flexible multi-energy microgrid presents an effective solution. This paper presents a multi-energy microgrid ...

Bi-objective optimization for topology design of underwater multi-microgrids.

ABSTRACT Connecting independent microgrids (MGs) to multi-MGs through a reasonable topology design is beneficial for improving the operational stability and power supply ...

Increasing multi-energy coordination in the ship necessitates advanced operation strategies to achieve greenhouse gas reduction and energy efficiency improvement in the maritime ...

Download Citation | On Oct 1, 2025, Hongpeng Liu and others published Capacity allocation optimization of power-hydrogen multi-energy microgrid including offshore wind power, underwater compressed ...

Marine Energy Grid Interconnection and Microgrid Research NLR is a key contributor to the grid interconnection of renewable generation and the development, validation, and deployment of ...
