Should I buy a square wave or sine wave inverter?

Low-battery alarms (stops over-discharging your battery). Go Square Wave if you only need to power basic devices (old fans, incandescent bulbs) and want the cheapest option. Go Sine Wave if you have modern electronics, a solar system, or value quiet, efficient power. With Leaptrend's range of inverters, you don't have to compromise.

Do you need a sine wave inverter?

A sine wave inverter is highly recommended for electric motor-powered products such as refrigerators and air conditioners. These motors are sensitive to the waveform generated by square wave inverters and may not work efficiently or silently.

Are sine wave inverters more energy efficient?

Sine wave inverters tend to be more energy efficient as they produce less heat as by-products, especially when running loads with power conditioning equipment such as a UPS. Conversely, square wave inverters are less efficient due to the inherent design limitations and can result in higher energy costs over time.

What is a sine wave inverter?

Sine wave inverters (also called "pure sine wave") produce a smooth, curved waveform that matches the power from your local grid. Think of it as "clean" electricity--gentle on devices and efficient. What They're Good For: All modern electronics: Laptops, smartphones, LED lights, and even sensitive gear like CPAP machines or home security systems.
